END-TO-END CONNECTIVITY

Top performing networks demand comprehensive infrastructure solutions. Breadth of product offering helps make Ictech the #1 candidate for complete government Connectivity Solutions.

It can be difficult to select a **single connectivity name** with the range of products necessary to address every civilian or defense application. A "patchwork" system of components from different suppliers can raise serious performance and compatibility issues. Not to mention the added purchasing and installation headaches.

Ictech provides the most complete, fully integrated line of government Network Connectivity Solutions. Our state of the art systems link every building, closet and desktop. Older facilities with solid walls and ceilings benefit with flexible Ictech infrastructure solutions and full legacy application support. Aesthetics and space efficiency can also be prime considerations when bringing modern technology to America's historic buildings.

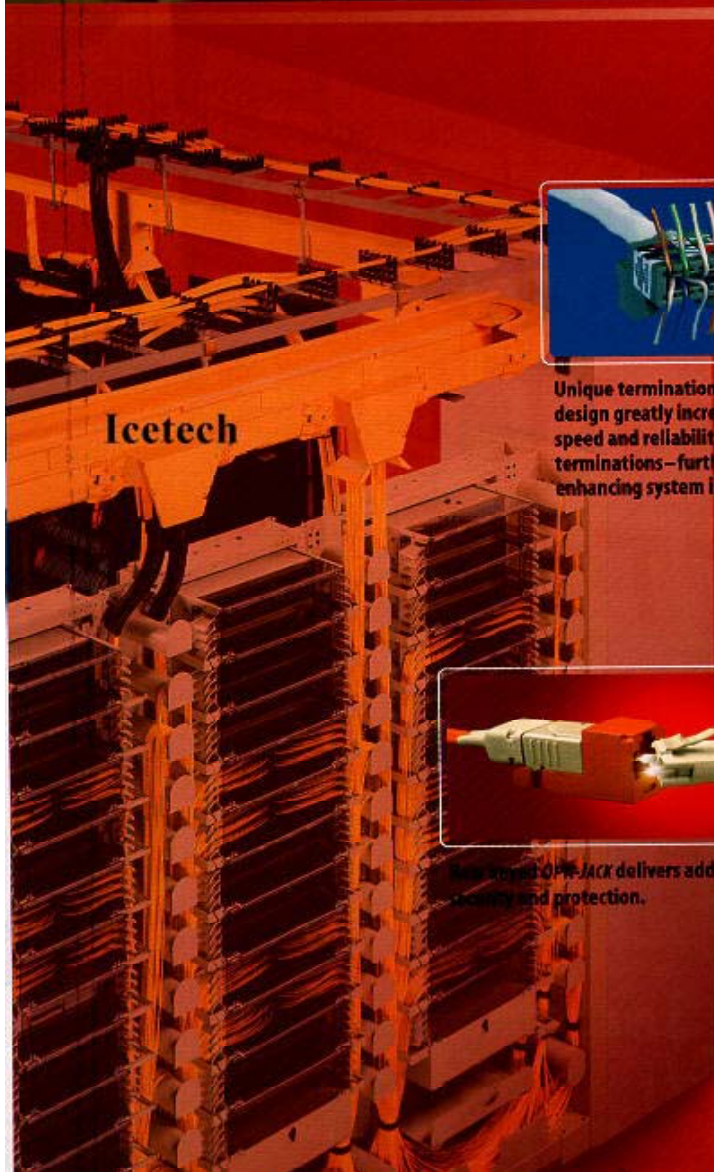

Specify a single name with the expertise to understand your government network applications. Ictech offers more products to connect, manage, route and identify network cabling... anywhere on the premises.

TOTAL SYSTEM INTEGRITY

Vital cabling infrastructures demand uninterrupted performance. An estimated 50% of network failures are caused by damaged cabling and substandard pathway products. Unauthorized access and intentional abuse further threaten network integrity.

Unique termination cap design greatly increases the speed and reliability of field terminations—further enhancing system integrity.

New keyed OPTI-JACK delivers added network security and protection.

Icetech employs cutting edge technologies to increase overall network performance and minimize downtime. Our products demonstrate bandwidth capabilities well beyond existing standards specifications to satisfy state of the art network requirements.

But advanced engineering is just one factor in achieving optimum system throughput. Often overlooked, proper **cable management** is crucial to network performance. In many installations, patch cords and equipment cables are pushed aside or concealed—yet these essential elements are equally important as the fixed cabling. **PANDUIT** Cable Management Products prevent damage to fiber and copper patch cords and cabling throughout the infrastructure. All of our Surface Raceway Systems are built with proper bend radius control to prevent cable performance degradation from pinching. And **PANDUIT** Network Cable Ties and Accessories keep cabling properly organized and easier to maintain.

Some defense and civilian agencies need additional network protection. **PANDUIT** innovations like the new keyed, color coded **OPTI-JACK**® Fiber Optic Module and tamper resistant pathway products provide **more secure access** and minimize intentional damage to government networks that handle sensitive or classified information. To eliminate EMI interference, shielded modules and patch cords add an extra layer of protection.

Icetech

We're Also Certified by all Major Manufacturers Including:

- Lucent Systimax™
- Belden-Krone Symphony
- Leviton
- Hubbell Premise Wiring, Inc.
- ICC
- MOD-TAP
- Siemons
- Panduit
- Krone
- 3M Volition
- Superior Modular
- Berk-Tek
- AMP
- Ortronics
- Siecor
- Nordx/CDT

Icetek's trained RCDD staff (Registered Communications Distribution Designer) and technicians are dedicated to the highest standards of datacom design and installation.

Our structured cabling installation staff maintain manufacturer trained certifications. We are a PANDUIT Registered Installer for cabling components and a FLUKE Gold Partner for test and measurement equipment.

In addition to cabling systems we can provide LAN and WAN design, installation and support. We are an NBase Xyplex business partner as well as providing solutions and support for 3Com, Nortel, Ericsson and others.

Breezecom is the leader in radio bridge hardware, with over 42% of the world market. Icetek is a fully accredited Breezecom systems designer and installer.

Cisco leading manufacturer of ultra high capacity wireless and systems designers and systems installers.

Allgon are manufactures of Carrier Class, medium speed, long haul microwave radios. Icetek is an authorised system house for Allgon equipment.

Ceragon are a leading manufacturer of ATM radio links, Icetek is accredited as a systems designer, systems installer and for systems maintenance.
